

Sealing tape for roof tiles

The simple solution for the sealing of roof tiles that have been cut to fit.

- Rain-proof
- Weather-proof
- Easy to compress
- Self-adhesive on one side
- Does not contain any harmful substances
- Resistant to mould fungus and micro-organisms

Mounting information

The sealing tape is a water-proof pre-compressed foam sealing tape. It is glued to the adapted roof tile. After that, the roof hook is mounted. This prevents any infiltration of water (rain, melting water) into the roof construction. The sealing tape is especially recommendable for low roof inclinations and extraordinary tile shapes.

- Can be installed at any time
- The fastening to the tile is carried out by hand
- About 10 cm of sealing tape are required for one roof hook
- The surface must be clean, dry, and free of dust and grease

Technical data

Material	Open-celled polyurethane soft foam with flame-retardant synthetic resin
Dimensions	Rolls of sealing tape with a length of 10 meters each Measurements on the roll: about 15x7 mm; after installation: about 15x15 mm
Colour	Grey
Item number	973000-221
